PROFILE

Final-year software engineering student interested in backend and full-stack development. Built several academic web systems using PHP, Laravel, JavaScript and MySQL. Looking for an internship to gain professional software development experience and improve practical engineering skills.

EDUCATION

Bachelor of Software Engineering - Malaysian University | Expected 2027
CGPA: 3.18/4.00

SKILLS

PHP, Laravel, JavaScript, HTML, CSS, MySQL, Java, Git, GitHub, Postman, basic React, basic Python

PROJECTS

Hostel Booking System | Laravel, MySQL

Developed student login, room booking, complaint submission and administrator management functions. Used Laravel authentication, database migrations and form validation.

Campus Event Registration Website | PHP, MySQL

Created a web application where students can view events and submit registrations. Implemented CRUD functions and database connectivity.

Simple Weather Web App | JavaScript

Built a responsive page that retrieves weather information from a public API and displays current conditions based on a searched city.

ACADEMIC EXPERIENCE

Software Testing Assignment

Prepared test cases for login and registration functions and recorded expected and actual results. Practiced black-box testing and defect reporting.
